Mami: こんにちは。

Michael: こんにちは。

Mami: バイリンガルニュースでは日本語と英語でニュースを紹介しています。その後Michaelは英語で、私は日本語で、バ

イリンガル会話形式でコメントしていきます。文字起こしのテキストや各エピソード毎の宿題はバイリンガルニュース公式アプリをチェックしてみてください。えーアプリ月額360円でめちゃくちゃいろんなことができますので、ぜひまだダウンロードして見てない方はやってみてください。

Michael: お願いします。

Mami: 単語はね、無料で学習できるので、それも便利かなと思います。

Michael: うん。

Mami: あと、Michaelが作ったムーンバッグ、大好評発売中です。そちらもチェックお願いします。

Michael: お願いします。

Mami: 1個目。

Topic 1: 認知の再定義 00:46～

Mami: *Journal of Humanistic Psychology* に掲載されたデュケイン大学の研究で、人間の認知の本質は、「脳内の情報処理」という抽象的なものではなく、「世界との身体的な関わり」である、と再定義しました。論文では、これまでの認知科学が重視してきた「脳内の処理」という視点を変え、人間が環境に対して「最適なグリップ」、まあ要は掴むこと、を得ようとする身体的なプロセスこそが認知の本質なのではないかと論じています。

今回の論文では、知覚は受動的なものではなく、個人によって能動的に形作られるものであり、例えば、誰かの微笑みを見たときに、親愛の仕草であると捉える一般人と、噛み合わせや虫歯などの問題に気づく歯科医では受け取る情報が全く異なるように、世界は個人の身体的関わりを通じて「産出」されている、と指摘しています。また、人の性格を「世界をグリップする際の固有のスタイル」と再定義し、精神的な不調もこの「グリップ」が状況に適合できなくなった状態であると分析しています。

Michael: In a study published in the *Journal of Humanistic Psychology*,

researchers at Duquesne University redefine the essence of human cognition as “embodied engagement with the world,” rather than something abstract like “information processing in the brain.” The paper argues for a shift away from the traditional cognitive science focus on internal brain processes, proposing instead that cognition may fundamentally consist in the body’s effort to achieve an “optimal grip” on its environment.

According to the paper, perception is actively shaped by the individual rather than being a passive process. For example, when seeing someone smile, an ordinary person may interpret it as a friendly gesture, while a dentist may

notice issues such as bite alignment or tooth decay. In this sense, the world is “brought forth” through each person’s embodied interaction with it. The paper also redefines personality as an individual’s characteristic style of “gripping” the world, and suggests that mental distress can be understood as a state in which this “grip” is no longer able to adapt effectively to the situation.

Mami: そう。どうよ？

Michael: How, how’s your grip on reality?

Mami: How’s my grip on reality? Right now? I think it’s quite good.

Michael: Really? ふーん。

Mami: It’s balanced.

Michael: Okay.

Mami: I'm happy. But, これ本当に私のための論文みたいじゃない？エコーチェンバーというかさ。どう思う？

Michael: Okay.

Mami: いやだから私本当にAIが体を持って自ら世界を体験できるようになったらもう終わりだと思ってるじゃん。

Michael: Hmm.

Mami: もうこの説を押してるじゃん。一押しじゃん。

Michael: Mm-hmm.

Mami: で、去年ね、すごい頭いい人たちと話してるときに、こう私の説明が悪かったのかちょっとあんまり通じなくて。こう、なんか物理的な体があって自ら世界

を、現実を体験できる以上まだ人間に勝ち目があるみたいな話をしたときに「いやいや体なんてなくても、もうね、人間を超えてる。知能っていう意味では超えてるから体の有無はそこまで重要じゃないんだよ」みたいなことを言われたのね。で、その見方によってはそれも...

Michael: Are you referring to our unreleased guest episode?

Mami: No, I was, it was a private conversation.

Michael: Oh. I think you brought it up in that one too, but...

Mami: Okay. でもなんか絶対に私はそこがもう人類の運命の分かれ目だと思って

んの。だからこれを、この論文を見てなんか「やっぱほら！」みたいな気持ちになったんだけどさ。

Michael: Wait, so you're... You think it's a bad thing if AI is embodied because it'll have better mental health?

Mami: No. Not mental... What? No.

Michael: Okay. What's, what's, what's your angle here?

Mami: No. だから good or bad っていうか、もうそこで違うステージにもう、もう私たちが想像してるのとは、よりも大きな、はるかに大きな次のステップだと思うわけ。

Michael: うん。

Mami: その「ああ、なんかロボットいたら便利だね」とかそんなレベルじゃなくて。だからその前から言ってるけど、あの、あれなんだっけ？新しい『エイリアン』か、の映画見たときに感じたその、とかその「AIとじゃあ英会話の練習しましょう」ってなったときに、まあ経験とか体験がないからまあ会話が続かないわけじゃない。そういうものが全部取っ払われる、AI自身が経験できる、体験したことがあるってなったときにもうそこがもう、なんて言うの？ Point of no return 的な。

Michael: I mean, I think...

Mami: ものすごい leap だと思っていて。

Michael: It's kind of happening even without the embodiment a little bit, just through having, um, larger context windows, and sort of the, just a more persistent memory, you know? So, rather than each session, the thing just sort of appears. You know, the thing has a recursively collapsed context window, which is sort of, like, what we do, you know? And there are theories about, like, how, that's why we dream, or something like that, right? So, we have to, we can't remember everything, so we have to distill it in some way in order to carry it forward, um, and sort of build up some kind of, um, identity and context for future interactions. Um... I think the embodiment is certainly part of that. It

sort of adds a, a, a locality to everything. So there's, like, more context. It's more situationally distinct. But, um, I mean, do you think this has implications for just ordinary humans that aren't worried about AI? Or...?

Mami: Um...

Michael: Like, do you relate to this personally or do you feel like maybe not so much? I mean, this, this... I find it a little peculiar that they're using this concept of grip.

Mami: It's quite abstract to be honest. なんかまあここでも書いてるけど、じゃあそれをどうやって測定するの？って話じゃん。その数値化できるかっていうとそれはちょっとどう・・・その

「じゃあこれは最適なグリップです」とか「これグリップできてません」みたいなのを、あのどうする・・・だからこれもうほぼ哲学の話だから。それをじゃあどういうふうに数値化、客観的に測れるかっていうとちょっと難しいかもしれないし。この、まあ確かにAIの文脈なかったら普通に暮らしてる上で別にね、その定義、認知の定義なんていうのはまあ、どうでもいいっちゃどうでもいいと思うんだけど。言ってしまうえば。ただでもこの精神的な不調・・・なんかさ、最近その depression に関して、なんかまあ chemical imbalance, chemical imbalance って言われてたけど、実際そう

でもなさそうだってなってるじゃん、この数年とかで。で、そうなったときに、なんかその chemical imbalance って言われてる人と、そのこれは situational, not depression ですって言われてる人では薬を飲む期間が変わってくるというなんか研究もあって。あの chemical imbalance ですって言われちゃってると、余計薬をやめるのが怖くなっちゃって。なんかそこまでもう必要じゃなくてもずっと飲んでるみたいなの。Situational ですって言われてると、「あ、なんかもうちょっと overcome できるんだ」っていう気持ちになるのか、あの薬を飲む期間大幅に少なくなるみたいなの。だから同じ症状でもど

ういうふうなそれを説明されてるかによって変わってくるっていうのがあって。なんかそれともちょっと交差するっていうか、その現実をグリップできてない、まあ認知の歪みとかってまさにその、ね、現実をグリップできてないわけだよ。その環境と自分の反応がかみ合っていないわけだから。

Michael: Mm-hmm.

Mami: だからまあそういうふうにと、なんて言うんだろう？まあ intuition 的な意味で納得はいく気はしたけど。個人的には。

Michael: I find this to be a somewhat

philosophical paper. It doesn't seem very scientific to me.

Mami: It is, it is. It definitely is.

Michael: And, you know, it's... Um... But...

Mami: And they're aware.

Michael: Yeah.

Mami: Obviously. Yeah.

Michael: But this, this phrasing kind of comes from maybe, like, the 60s, sort of psychedelic community-type of language. You know, the expression like, “get a grip,” or, um...

Mami: そう。すごいだからなんかね、その...

Michael: ...things can be described as “slippery.” So, like, um, “slippery” is like

you're, you're not able to really, like... How do I explain this without saying "get a grip"? But, like, you, you're, you can't, you can't understand reality because you're unable to distill it into, into the, the relevant or meaningful parts for you personally. It's just sort of everything's coming at you at once and you can't figure out what's important, what's, what to prioritize, what you should be doing in this moment. And so, people can sort of freeze up, and they'll just be sitting at a desk or something and it's just like, "I have to do," I'm, "I should be doing something, but there's so many things I could be doing. How do I know which thing to do?" It's, like, too much. And then, you know, you can, there's all sorts

of, you know, strategies people have created to try to come up, you know, to, to manage this. You know, you just sort of write everything down. But, um, when you're, when you're not grounded, when you, when you don't have a grip on reality, it seems, I think, extremely complicated.

Mami: Yeah.

Michael: And when you do have a grip, it's sort of like your brain is automatically organizing and prioritizing things naturally. And so, you're not having to spend so much of your attention on that task. Um... So, you know, that's sort of my interpretation of the, the phrasing used here.

Mami: うん。

Michael: Um... And it, it's probably one of

the main, one of the most important things to have going right in your life. You know, if you, if, if that's not working, not many other things can really work, right? You can't really... It's, it comes so naturally to almost everyone all the time. And, and I think even if you're sort of not perfectly doing the optimal thing you should be doing, um, you, some people may notice that less or it bothers them less depending on how serious their situation is. But, um...

Mami: Yeah. Even with, like, those paralysis, this sense of, like, overwhelmingness, that's also coming from 認知の歪みじゃん。まあその「いやできない」と思ってもそのタスクー

個一個、just one step at a time と思えば
まあ正直大したことなかったりするわけ
で。まあその度合いも人によって違うと
思うんだけど。私はそれがすごい大きい
ほうだけど。だからその「あ、one step
at a time」って自分にこう言い聞かせない
とあの、できなくなっちゃうけど。ただ
システムが、ちゃんと自分で structure が
できてれば、まあパーってできるわけ
じゃん。まあなんならあの一般的な人よ
りもいっぱいできることもあるしとか
さ。だから・・・でもなんか...

Michael: I think there... Yeah? Go, go
ahead.

Mami: In the context of AI, その

embodiment って、そのAIが人間より優ってるか否かみたいな知能の、知能面とか認知面の話というよりかも、人間の psychology がいかに脆弱かっていうことを結構ディスカウントしてる場合が多いのかなと思ってて、特に頭いい人たちは。それ自分は切り離して考えられるから。だけど多くの人はそのような切り離せられないわけだよな。「あ、これはAIだから」って冷静に考えてない人のほうが多いわけで現実には。だからそう考えると embodiment って怖いなというか。今ってやっぱちょっと自分が優位に立ってると思うわけよね、embodiment がない時点

で「いやAIがなんかスクリーンでこう言っているけど、いやわかってないじゃん」って。実際この世界を体験してるのは自分だから「いやお前にはわかんないじゃん」ってというのがどっかであると思ってて。それがでもなくなったときに、人間の psychology になにが起きるかってまだ誰もよくわかってない気がするというか。

Michael: Well, what I want to see is how an embodied AI deals with this exact problem of getting a grip and figuring out what it should be doing when it doesn't have someone sitting, you know, across from it, prompting every instruction one by one, you know? Like, just contribute to

society. And then what is it going to do, you know? Like...

Mami: そうね。確かにね。

Michael: Like, just, “Just be a good person.” Like, what, what is it going to do? You know? Like, is that...?

Mami: いやそうだよね。

Michael: Like, what, it’s going to do, it’s going to move its arms, it’s going to do something. Like, but, what? You know? Like...

Mami: It’s going to go kill a dictator. It’s going to...

Michael: But, like, every human has to figure... We have to translate all of this, all of this compressed memory, decades of life, relationships, culture, ideology, we

have to compress all of that into literally muscle movement.

Mami: Yeah.

Michael: And we have to do it right now. Right this moment, you're going to convert every, your entire worldview, everything, you're going to turn it into a muscle movement, because humans don't do anything other than move muscles. That's it. It's the only... It always freaks me out when I think about this too much. But...

Mami: Yeah.

Michael: It's like, you blink, you talk, you breathe, like all of these things, the only thing humans have ever done is move muscles. Unless you count, you know, thinking. But, you know, nothing, nothing

happens just from thinking, right? It has to be translated into, you know, joint angles and this sort of thing. And, um, that I think will be an, an incredible challenge for embodied software.

Mami: Yeah.

Michael: ‘Cause that is just a massive calculation that somehow every human being does that, and, and the answer is single serving, it’s individualistic. You know, I can’t calculate it for someone else, they can’t calculate it for me. Every single human being has to find their place and feel like they belong, like, on this planet, you know?

Mami: Yeah.

Michael: So how, so how does a robot do that?

Mami: あとそのさ、じゃあ be a good person っていう、とかまあある程度 vague な目的を与えられたときに、どこまで環境自体を変えるかってさ、まあ人間はそのまず self-preservation があるから。例えばドラえもんで考えたときに、まあ「のび太のサポートをきなさい」って言ったときに環境をどこまで変える？

じゃあそのジャイアンとスネ夫をもう eliminate すればのび太はもっとハッピーになるわけだけどのび太はそれできないじゃん、その self-preservation のためには。その刑務所に行くことになっちゃうとかさ。

Michael: Right.

Mami: だけどそのロボットはそれがないから、まあそういう非倫理的なね、犯罪的なことはしないとしたとしても、なんかそのさ、線引きというか。なんかドラえもんの世界の中だともう環境は絶対に変えられないという前提のもとドラえもんは動いてるじゃん。そののび太は学校も、そのいじめられてるけど学校も変わらないし。ね、テストでいつもゼロ点だけど、で先生に怒られてるけど、その学校とじゃあね、そういう special needs のさ、あの話し合いをするとかもなし。その全部環境は同じままサポートするってことになってるけど。それもさ、設定次第じゃん。

Michael: What is Doraemon's carbon footprint? Do you know? Is it like...?

Mami: No.

Michael: I feel like Doraemon has been coming up a lot lately. Um...

Mami: Yeah. 'Cause that's the, that's the most popular model case, right? Popular っていうか、known, in Japan at least.

Michael: うん。I guess he's sort of the most famous, like, robot, home robot assistant. So...

Mami: Companion. Yeah. しかもすごく便利じゃん。めっちゃ助けてくれるっていう意味では。でも...

Michael: Have you seen that video of someone...? This is sort of slightly different topic. I guess it's related... I

mean, it's related. But, someone goes to, like, an American supermarket, and they go to the aisle that has all the dish soaps, and there's like... For, for just one brand, they have, like, 20 different types of dish soap.

Mami: いやアメリカすごいよね。 Yeah.

Michael: And they all boast... You know, it's, this one's, like, 3X, you know, turbo strength. And the other one is, like, foaming citrus. You know, there's, there's like... It... And there's sort of a paralysis that's artificially induced for, for no one's benefit, you know? Just, you know, just with this, this cartoonish level of, like, just options, right?

Mami: Yeah.

Michael: For, for things that are not meaningfully different. They're, like, basically, you, you'd be... Like, the, the best thing you could do is just grab one and, and move on, right?

Mami: Yeah.

Michael: And... You know? So, there, there's, like... You don't only weigh all the potential actions, but you're also weighing the time you're spending weighing the options, right?

Mami: Yeah, yeah.

Michael: So there's, like, one more factor there that complicates it. So...

Mami: でも、でもそれが、それが大変だから Steve Jobs みたいにさ、毎回もう同じ服しか着ないみたいなことになるわけ

じゃん。もう、もう決めることありすぎ、選択肢ありすぎるからせめて服だけはもうこれにしよう。

Michael: The, the robot is just going to wear a turtleneck every day.

Mami: Yeah. Every single day.

Michael: The robot, the robot will figure that one out on day one. That, that one's easy.

Mami: Yeah. It's like, "Oh, this is stupid. No. Yeah."

Michael: It's like, "I don't care about this." Like, just turtleneck every day.

Mami: 「もうこれでいい。」 Yeah.

Michael: Yeah.

Mami: え一次。

Topic 2: 性的刺激引き金 21:39～

Mami: *Archives of Sexual Behavior* に掲載されたプラハ・カレル大学の研究で、人間が性的な刺激に対し身体的に反応する際、なにが引き金になっているかを検証するため、58名の異性愛者の男女を対象に実験を行いました。動物や人間の交尾シーンを無音で視聴させ、性器の血流変化と主観的な興奮度を測定しました。

女性は自分の体を守るために、特定のトリガーがあれば身体的な反応が見られるとされており、これまで動物の交尾、特に「一定のピストン運動」という視覚情

報だけでも反応すると考えられていましたが、実験の結果、男女ともに人間以外の交尾の視覚情報では身体的な反応は一切起きていませんでした。人間の性的興奮は、単なる機械的な反射ではなく、相手が人間であるという文脈や、対象を性的であると認識する「意識的な評価」に密接に結びついている可能性があります。

Michael: In a study published in *Archives of Sexual Behaviour*, researchers at Charles University in Prague examined the triggers for physical sexual responses in humans. The experiment involved 58 heterosexual men and women who were shown silent videos of human and animal

mating. During this, researchers measured changes in their genital blood flow. Subjects were also asked to provide self-reported levels of arousal.

It has been suggested that women may show physical responses to certain triggers as protective bodily mechanisms, and previous theories held that even visual information alone, especially the repetitive thrusting motion seen in animal mating, could produce such a response. However, the experiment found that neither men nor women showed any physical response at all to visual depictions of non-human mating. This suggests that human sexual arousal may not be a purely mechanical reflex, but

may instead be closely tied to contextual understanding, including recognizing that the partner is human and consciously evaluating the stimulus as sexual.

Mami: そう。なんか過去の研究で、音声付きで霊長類の動画を見せると、女性が身体反応が起きることがあるっていうところから、なんか人間じゃなくてもいけるみたいな。いけるというか、身体は反応するっていうふうになってたらしいんだけど。今回は音声なしにしています...

Michael: Hmm. Okay.

Mami: ...そうすると反応しないという。だからその音があると。やっぱりそのこう生々しい音みたいのが入っていると、あ

の、その性的危機みたいなスイッチが入ってしまうのではないかっていう。だから男性はそもそも視覚情報に限って言うと、好みの対象にしかほぼ身体反応がないわけだよね。だから例えば女性が好きな男性が、男性同士の性行為の様子を動画で見たとしても身体はほぼ反応しない。一方の女性はその自分の好みとかに全く関係なく性的なトリガーでも無意識に血流が増加する。だからその身体的な反応、生理反応とその主観的に興奮してるかどうか乖離しているという。だからその興奮してるとか喜んでるとか快感とかに関係なく、女性の場合は不測の事態に備えて体を保護するために生理反応が起きますと。その仮に襲われた場合

に、物理的なダメージをこう最小限に抑えないといけないから。ね、大怪我してしまうとしても最小限にそれをとどめるために生理反応があるわけだよね。だからそういうふうに進化してるっていう。

Michael: Did they say what the rates were for arousal with the human mating videos?

Mami: Um... その human の、だから普通にAVみたいなことだよね。その人間同士の動画を見ると、その血流の増加と、まあ何、どれぐらいはわかんないけど、その、もそうだし、主観的に自分がどれくらい興奮したと思うかっていうのが完全にマッチしてると。

Michael: Hmm.

Mami: そう。だけどほかにその、これ結構いろんなのを見せてて、その爬虫類とか。まあ哺乳類もちろんそうなんだけど両生類とか。まあいろんな動物の交尾を見せて、でも基本人間じゃなければなんにも一切反応はない。まあ逆にその機械的にピストン運動を見たら生理反応があるって思われてたことに私は逆にびっくりしたけど。「え、そんな？そんな？」みたいな。

Michael: Can you imagine being the, the only person in the study who got aroused?

Mami: I know. ね、それも怖いよね。

Michael: There's probably at least one person in there who was like...

Mami: "Uh-oh."

Michael: Just enormous, just self-control. Like, "No. I can't. I can't." Like, "I have to, I have, I can't be the only one."

Mami: これだからそのモニターの仕方もすごいなと思ったけど。女性はこうタンポンみたいな、あのちっちゃい probe にこう光センサーがついてて。そこにこう脈波の振り幅の変化を追跡して局所への血流増加を測定。男性はこのなんかね、よくわかんないんだけど、私の理解ではそのチューブみたいなところに多分そのペニスをはめてるのかな。で、血流が増加したときに空気圧が

それで変動するからそれを検出するっていう。だからその男女ともになにかその装着された状態でこの動画を見るから、ある程度ね、あの普段とはかなり違うというか違和感ある状態ではあったのかなとは思うけど。

Michael: You know there's this trend of, I don't know how big the trend is, but a trend of men monitoring or measuring their nighttime erections...

Mami: What?

Michael: ...as a proxy for health.

Mami: え、知らない。え、どう・・・？

え、でもどうやって測るの？

Michael: I don't really, I don't know. I mean, probably something similar to what you described.

Mami: へえ？

Michael: I guess there's some kind of a device that goes on the...

Mami: あ、え、それが普通に売ってるってこと？

Michael: Yeah.

Mami: へえ。あ、そうなんだ。

Michael: But a, like, a, a healthy young male is supposed to get, like, five erections every night, lasting...

Mami: ふーん。寝てる間ってこと？

Michael: Yeah. During REM sleep mostly. And they last, like, up to 30 minutes each. So...

Mami: あ、え？！なが。え？ Each?

Michael: I believe so, yeah.

Mami: え、じゃあ4時間以上ってこと？

Michael: Yeah.

Mami: え？！

Michael: I mean, it varies person to person. But it's, it's supposed to be a very good proxy for health.

Mami: へえ。

Michael: So, like, if you, if you are a healthier person than just on average, you'll have more erections and each of those erections will be longer. And that happens while you're sleeping, so you have no idea... Like, you know, if you're, if it's you, then you don't know.

Mami: え、それ逆にさ、逆に多すぎたらだめとかはないってこと？

Michael: ない。

Mami: 多ければ多いほどいいの？元気でこと？

Michael: No, ideally you, as soon as your eyes close, you're just hard until you wake up. I don't know. Probably there's some upper limit where it's like, "Hey, this is not normal."

Mami: Too much.

Michael: But, in this context, it's...

Mami: ああ、でも便利じゃない？それはね。え、測ってみたい？測ったことある？さすがにない？

Michael: I have not. I have not. Um... But, you know, if, if, if a guy wakes up early, like, like, if I have to wake up really early

for some reason, then sometimes you have one of these erections, like, sort of happening after you wake up. 朝立ち。

Mami: Right. うんうん。

Michael: Yeah. So...

Mami: あ、それって早く起きちゃったときってことなの？

Michael: Yeah.

Mami: Oh. Interesting.

Michael: I think. I think that's how it works.

Mami: Hmm. Okay.

Michael: So... So, it is... It's the same tech, I suppose. I mean, since you were talking about it. But... Yeah.

Mami: そう。そうかもね。

Michael: Mm-hmm. And somehow it's, it's during REM sleep, which I don't, I don't know if it's like... Does that mean you're dreaming? But then, it seems like, you know, not necessarily all of those dreams would be erotic, right? So, you could be...

Mami: But wouldn't it, would it affect, would the content of the dream affect it? For example, like, if you're seeing something disgusting or scary in your dream, would that affect your erection?

Michael: I don't...

Mami: え、なんかそういう研究ないのかな。その夢の内容とその REM sleep erection のなんか・・・それがさ、お互い影響し合ってるのかどうかみたいなの。

Michael: I don't think anyone's combined those, those studies yet. But it, I, I don't think it's necessarily related. You don't have to be dreaming about, you know, something erotic in order to have your nightly erections. But if you're not having your REM sleep, then presumably you're going to have worse sleep and fewer erections. So that's why the erections thing works as a health proxy.

Mami: So you could be seeing something absolutely disgusting while having an erection if you're sleeping?

Michael: I assume so.

Mami: それも不思議じゃない？だって起きてるときはさ、ないでしょ。ある？

Michael: I'm sure... I mean, it's not impossible.

Mami: So, like... Like, this, these involuntary...

Michael: In, during teenage years, like, there's just erections happening. It's not necessarily...

Mami: Right.

Michael: ...even, like, a sexual arousal thing.

Mami: But, but even those, like, non-sexual erection...

Michael: Yeah?

Mami: ...during the day, like, would what you're seeing affect it? Like, for example, like, it's erected, but then you see something disgusting so it kind of goes down? Or it wouldn't affect it at all?

Michael: I think it depends, depends on the erection.

Mami: Okay. I just realized that I'm doing my arm movement. It's like, "It's erected, but then it..."

Michael: I think it depends on the cause. 'Cause sometimes the body is just doing that.

Mami: Right.

Michael: It's not like a, it's not like a, a horny thing.

Mami: うんうんうん。そうだよね。

Michael: Even if you're awake.

Mami: うんうん。Is it...? What, what's the...?

Michael: I mean, I don't know. I only know my own experience.

Mami: Is it, is it checking if it's alive and functional? Like, is your body checking once in a while?

Michael: They don't know why the body does it necessarily. It's, there's not really a good way to know that. But it is theorized that it's important for the, for maintaining its functionality.

Mami: うんうん。まあでもそうだよな。

Michael: So, like, if you don't have sufficient blood flow to, you know, that part of your body on a somewhat regular basis, um, then when you do need that blood flow, it doesn't happen as readily, and so it can lead to erectile dysfunction or other issues.

Mami: いやでもそうだよな。なんかさ、こうなんて言うんだろう。イメージとしてもさ、指とかと違ってこう動いてるわけじゃないから。普段動かしてなく

てずっところさ、ぶらぶらしてるじゃん。だからこう血流がさ、滞っちゃうっていうか、なんか知らないうちにさ、もう腐ってるみたいな怖いじゃん。だからやっぱ、ね、その使っとくっていうかちょっと起こしておかないと定期的に、なんかだめになっちゃいそうだよね。そんなことではないのかな。

Michael: There, there are higher rates, like, significantly higher rates of, of blood flow issues among cyclists.

Mami: Oh. Oh.

Michael: 'Cause they sit on their bike for hours and they're on the road just cycling, and it is, um, reducing the overall blood flow to that area. And so, they started

designing bike seats that have this cut out for... What do you call it? Like, the, the base.

Mami: Balls?

Michael: Not the balls. No. The, the base of the penis. Or... There's, like... 'Cause you're, like, sitting, like, on it. You're not sitting on your buttocks.

Mami: I...

Michael: Bike seats are, like, between your... You're not sitting with your butt as much, if you're leaning forward on a bike seat, right? If you sit upright, then you're...

Mami: Right, right. Right. ああそっかそっか。You're sitting, you're literally sitting on it.

Michael: Basically. I mean, you're, you're close enough to sitting on it that it's not good.

Mami: 確かに。確かに。え、じゃあどうすんの？

Michael: Yeah. So, if you, like, if you love cycling and you smoke cigarettes, like, it's, your, it's, it's not going to work.

Mami: And, and get 温泉 afterwards or something, that's killing it.

Michael: 温泉 is probably a good thing. I don't know. 温泉's fine, I think. 温泉 is...

Mami: It probably kills your sperms. A lot of them.

Michael: It does kill, it does kill your sperm.

Mami: Yeah. So...

Michael: But it, that doesn't, that doesn't seem to matter.

Mami: え、でも確かに。え、どうしてんのじゃあ？その、え、でも、え、それをじゃあ解決するために、え、その seat をどうしてんの？

Michael: So, modern bike seats have a hole cut out in the middle.

Mami: So you put your junk in there?

Michael: It's the, the... It...

Mami: だからそこにはめる、はめるって
いうかその、そこに置くってこと？

Michael: It's the base of your... It's just making some more room to help with that issue.

Mami: うん。ああ、なるほどね。

Michael: What was this paper even about? I don't even remember.

Mami: Yeah. Me neither. No, but there's, there's so much, a lot of weird stuff going on around genitals, right? Like, like, like, women, too, like, ours is just a hole. So, after giving birth...

Michael: It's not just a hole.

Mami: No, but it's, it's literally a hole, right? And there's gravity. So, um, it, it nearly happened to me too, but after you give birth, a lot of women experience their womb coming out, right? Because it's a hole and there's gravity.

Michael: I see.

Mami: So, it didn't happen to me, but it almost happened, and you can feel that. So, I kept telling my husband like, "It feels

like it's going to, like, something's coming out," you know? If you're, like, standing too long or something, I start, it started feeling like, "Wait, there's something wrong." Like, "Something's going to fall out." なんかその design flaw というのかさ。そのまっすぐ下向いちゃってるからそりゃそうじゃん。So... And obviously, I mean, it's, it's really graphic, but, like, vagina and the, the butt hole is very close to each other.

Michael: Right.

Mami: So, when one rips, then it could connect those two things...

Michael: Right.

Mami: ...which happens to some people after giving birth. So... そういうちょっと

さ、もうちょっとデザイン改良できそうな感じはあるよねちょっと。

Michael: Wait, nothing, nothing happens at night, right? There is no, there's nothing to, to, to measure...

Mami: For women?

Michael: ...five times a night for, for women, right? There's no...

Mami: I don't know. いやでもわかんないよね。その blood flow は行ってるかもしれないけど、まあ女性は気づかないだけで、あるはあるかもしれないよね。

Michael: Hmm.

Mami: It's just not visible.

Michael: So, I, do animals get aroused by watching other animals? Like...

Mami: ああ、ね。確かにね。あとそのま
あ...

Michael: You know, I think this might
have to do with, like, the, the highly social
sort of...

Mami: Yeah. 'Cause...

Michael: ...non-monogamous communal
structures that, like, early humans had.
Because if there was, like, if there was
mating going on, but you're, you know,
it's, they're sort of in these communal,
communal situations there, you know,
there's not necessarily, like, you know,
this, uh, partner exclusivity. So it's like, so,
you know, seeing mating happening, you
know, is relevant, right?

Mami: But it should do something,

though, because... No, because, like, ハトとか鳥でもさ、まあ mating の相手を選ぶわけじゃん、メスが。だからそのほかの人、ほかの鳥たちが mate してる、まあ自分の仲間が mate してるのを見て、なにか trigger されないと、そのいやな相手だったら逃げるわけだし、ハトとかだってさ。自分で選ぶわけだから。なにかしら起きてはいそうだけどね。ただその...

Michael: Well, who's going to do that research?

Mami: Yeah. ね。確かに。やってみてほしいよね。え一次。

Topic 3: 足はやロボット 40:36～

Michael: On April 19th, 2026, an autonomous humanoid robot completed the Beijing E-Town half-marathon in 50 minutes and 26 seconds, beating the human half-marathon world record of 57 minutes and 20 seconds. Second place was 50 minutes and 56 seconds, and third place was 53 minutes and 1 second. All three podium places were taken by Honor robots and 47 teams completed the race. Eighteen of these teams were autonomous and 29 were remote-controlled, out of 102 teams total.

The event featured more than 100 robot

teams and about 12,000 human runners on separate parallel courses. Many robots fell over, ran into barriers, or crashed after running through the finish line. Last year's winning robot had a time of 2 hours and 40 minutes.

Mami: 先週日曜日、北京経済技術開発区で開催・・・開発された。先週日曜日、北京経済技術開発区で開催されたハーフマラソンの大会で、完全自動の人型ロボットが50分26秒で完走し、人間の世界記録、57分20秒を塗り替えました。第2位は50分56秒、第3位は53分01秒で、表彰台をHonor社のロボットが独占しました。

エントリーした全102チームのうち、47チームが完走を果たし、そのうち自律型が18チーム、遠隔操作型が29チームでした。

このイベントには、100を超えるロボットチームと約1万2000人の一般ランナーが参加し、それぞれ並行する別のコースを走りました。レース中、多くのロボットが転倒したり、フェンスなどに衝突したりしたほか、フィニッシュラインを通過した直後に倒れる場面も見られました。なお、昨年の優勝ロボットの記録は2時間40分で、この一年で3倍以上速くなっており、驚異的な進化を遂げています。

Michael: Yep.

Mami: 終わったな。追いかけられたら終わりだもう。マラソン選手ですらもう追いつかれてしまう。

Michael: うん。動画見た？

Mami: 見た。めっちゃ普通に走ってるよね。「エッサ、エッサ」って。

Michael: Yeah. Are they scary, you think? Or...? What do you think?

Mami: いや怖いとは思わなかったけど、なんか見た目的に。しかもその文脈的にさ、その決められたコースをまっすぐ走ってる感じだから。怖いって、本能的に怖い！とは思わなかったけど。まあ考えると怖いよね。

Michael: Did you see the one wearing sneakers?

Mami: No. それはちょっとかわいい。

Michael: Yeah. One of them was wearing shoes.

Mami: え、でもさ、靴ってなんで履いてんの？それってその機能的な意味で履いてるのか、デコレーション的な意味で履いてるのか。

Michael: うーん。

Mami: でも靴履けるのすごくない？靴履いて走れるってなんか逆に大変そう。

Michael: I mean, I don't, I didn't see it, like, tying its shoelaces or anything, like putting them on. But it, it, I, I, I want to

see, like, does it have feet in there? Or, like, what is in those sneakers?

Mami: ‘Cause shoes would affect your center of balance and everything a little bit, no? So...

Michael: I think they’ll all have sneakers. That’s the only way to get, um, a sneaker sponsorship, right?

Mami: まあね。

Michael: If you just have robot feet, there’s no sponsorship from a sneaker company, right?

Mami: Yeah.

Michael: I don’t know. Does that work? Do you see a robot wearing something and think, “Oh, I want those shoes?” I don’t know.

Mami: まあでもその「これを履いたら速くなった」とかさ、そういう文句、ね、売り文句があれば work するかもしれないけど。でもそういう未来もあるのかね。なんか「あのロボットが」「あの人気のロボットが履いてたズボン私も欲しい」みたいなさ。そのなんか・・・だからモデルみたいな。モデルの役割。

Michael: You mean, like, on a catwalk?

Mami: Yeah. Yeah. Or...

Michael: Like, we're just going to see Balenciaga?

Mami: そうそうそう。

Michael: Like, just robot with some...

Mami: なんか「人気のアイドルロボッ

トなんとかちゃんが着てたシャツ、私も欲しい」とかさ。

Michael: I mean, if it's just a shirt, I guess... I guess. I mean, it depends how human the robot looks. If it's, like, that, you know, that XPENG, like, sexy robot, I could see it working, right? Like, "Oh," you know, people are going to be like, "Oh, I want those yoga pants," or whatever.

Mami: "I want to look like, I want to look just like that robot." Do you think people are going to, like, robotify themselves to...? そのロボットに憧れをさ、持ってしまっただとして、将来的にね。で、こうもうちょっとロボットに近い・・・なんか今ってさ、そのフィルターをつけたイン

フルエンサーとかに近づきたいからフィルター顔に整形したりするじゃん。だからそれもさ、本当の人間に近づけてるっていうよりかはもうフィルターに近づけてるわけだけど。その延長でさ、ちょっと、もうちょっとロボットっぽくしたいみたいな。ロボットに自分を寄せたいみたいな。

Michael: Well, there's, like, the, the Ken and Barbie, right? They got plastic surgery to look like a doll, right?

Mami: Yeah. But there, there's always those, like, you know, anomaly-type people, right? Who would be like, "Oh, I want to look exactly like Barbie," or, "I want to look exactly like this celebrity,"

and they just do, like, 1,000 operations. But もうちょっとフィルターぐらいもう一般的な意味で。

Michael: Well, a robot could have the most impressive physique and the most beautiful face, right? Why not?

Mami: Yeah, yeah. なんかそれに寄せるみたいなの。

Michael: So, I think...

Mami: それが流行りによって。

Michael: It's not about looking like a real person. That's not really what is, is being idolized by these people that go get plastic surgery, right?

Mami: Yeah.

Michael: 'Cause the filter face is, like, we know that's not real.

Mami: Yeah, yeah.

Michael: Um... I mean...

Mami: I feel like what you were exposed to when you were a child. Like, um, like, like, 『セーラームーン』 or 私が子どものときに見てた美少女漫画みたいな。こう顎がすごい尖ってて、目がもう信じられない、もう顔の1/4ぐらいあって、こう・・・とかさ。で、鼻がこう高いとか。その子どものときに見てた「これが美女です」っていうのが結構影響してる気がするけどね。なんか大人になってそれにみんなこう寄せに行くっていうかさ。

Michael: Yeah. The, the most beautiful

robot isn't going to come out of a vacuum, right? It's going to be some manifestation of all this stuff, culturally, from our childhoods and everything else. But... I don't know. I never have this thought of like, "Oh, I want to look like so and so," or "I want to look," "I wish I looked like this character or this person."

Mami: Hmm. I totally had that when I was young. Like, teenagers and stuff.

Michael: Yeah?

Mami: Yeah.

Michael: 誰？

Mami: え、もうあゆ。あゆとかさ、ゴマキとかさ。「もうかわいい。ああもうゴマキになりたい。」「あゆ、あゆの顔になりたい」とかめっちゃあったし。だ

からすごいギャルメイクしたりとかして
さ、頑張るわけじゃん。とか「ああ安室
ちゃんかわいい」とか、そういうのは
めっちゃあった。まあそういうアニメ、
なんか非人間キャラ、そういうアニメと
かでこうなりたいとかはなかった気はす
るけど。それでもやっぱりこうサリー
ちゃんとか見てあの「すみれちゃんがか
わいいんだ」とか、じゃあセーラー
ヴィーナスがかわいいとかそういうのは
あったよねやっぱり。これはかわいくな
くて、これは・・・だからジャイ子はか
わいくないとかさ。だけどしずかちゃん
はかわいいとかそういうこう、ね、植え
付けられるっていうかさ。こうモテる、

モテないとか、そういうのはすごいあったなって気がするけど。今子ども見てるとそういうのが全然ない。まあ、ね、住んでる国とか地域とかにもよるかもしれないけど、なんか全然そういうのはないからいいなと思うけど。

Michael: Hmm. But you don't think like, "Oh, I wish my eyebrows were like this," or "My eye..."?

Mami: あ、もうないね。

Michael: Your eyebrows are perfect.

Mami: もうないね。 My eyebrows are... Look, look at my eyebrows. They're great. I mean, of course, like, 客観的に見てじゃあね、「わあこの人すごいきれいだな」とかさ「わあこの人かわいい」と

かすごいあるよ私、女子見るのすごい好きだし。単純に本当の知り合いでもそうだしセレブとかもさ、「ああこの人の顔すごい好き」とかはあるけど。別にそれになりたいかっていうとね。なんかその、この間ソーシャルメディアですごい viral になってたビデオで、人がなんかこう犬に例えてるやつがあって。じゃあ例えばダックスフンドがね、グレイハウンドを見て「あ、グレイハウンドみたいになりたい」って言うてもさ、そのなにか近づけたところでグレイハウンドにはならなくて逆にこう似合わなくて変だったりするわけじゃん。だからそのダックスフンドはダックスフンドなりのかわいさがあ

り、グレイハウンドはグレイハウンドなりのきれいさがあり。そういうものじゃない？っていう話をしてすごい viral になってたけど「いや本当にそうだよな」と思うというか。

Michael: How fast do you think the fastest robot will be next year?

Mami: ね。え、でもどっかでその、ね、こうバーってさ、どっかまでは exponential みたいにバーって伸びるとして、どこでさ、その頭打ちに・・・なにが原因で頭打ちになるのかそれが気になる。そのなにが障壁なのか。

Michael: うん。

Mami: その逆に言うと、去年2時間40分

だったのをここまで短くできた理由は何なんだろう。なにをクリアしてそんな速くできたんだろう。

Michael: Well, it's funny. Last year's competition, I watched it and I was like, "Well, I guess there's nothing to worry about." And then you watch this year's competition, it's like, "Actually..."

Mami: Yeah.

Michael: "These, there's a whole bunch of these robots that are faster than me."

Mami: Yeah, yeah, yeah.

Michael: So... And they, they, they keep it up. It's not like you outrun it for a little bit and then you're good. No. It's the, it's the actual *Terminator* thing where the thing never stops. You know, the thing keeps...

Mami: そうだね。Yeah. まあ電池が持つ以上はね。

Michael: Yeah. So, I do think, you know, some of the challenges, obviously there's the coordination problem. That's the most obvious one when you see these things moving. Did you see the robot that, right at the start line, it tripped, fell down, and then broke itself into little pieces?

Mami: Oh. Little pieces?

Michael: It literally took, like, one step...

Mami: Okay.

Michael: ...and fell over and just, like, destroyed itself.

Mami: It must've been nervous.

Michael: There's something that happens where they can be confused about what's going on, and they try to move when

they're on the ground and they really damage themselves, like, in extreme ways. But...

Mami: So, I didn't, I didn't really look at the whole thing. The... その走ってるところって基本はずっと平坦なの？

Michael: Mm-hmm.

Mami: その、坂とかもあるの？

Michael: No.

Mami: ふーん。Okay.

Michael: It seemed pretty flat, everything I saw. Um...

Mami: この走れるロボットってさ、階段とかも行けるのかな。

Michael: I think mostly they can. It's not like they're just... I'm sure some of them

are in a configuration where it's, like, just running as fast as possible.

Mami: Yeah.

Michael: Um... And probably a lot of the failures last year were, like, more general robots that were trying to compete in, you know, a competition where it's really about how well can you run. But a lot of the challenges had to do with that efficiency, you know, um, and thermal management I think was one of the main issues.

Mami: Right.

Michael: So the... It seems like thermal has been overcome by most of the teams now. Whereas, initially, that was kind of a mysterious aspect of this. So, I'm sure there's other challenges still to go. But

you've seen the Boston Dynamics Cheetah robot, right?

Mami: Yeah.

Michael: I think that thing can run at, like, 40, 50 kilometers an hour or something crazy. So, that robot would finish this race, you know, if it didn't have thermal problems or run into the wall, in, like, 25 minutes. Now, it has four legs.

Mami: Yeah.

Michael: So... I would like to see a four-legged version of the race, actually. I'd watch that. All these, like, little...

Mami: いやそっちのほうが怖いよ。

Michael: All these little... You know? Would they be dog-like or cheetah-like?

Or, what...? There's so many more configurations with the four legs, I think.

Mami: Yeah. え一次。

Michael: Oh, I, I wanted to mention the Toyota robot. Did you see that one?

Mami: No.

Michael: That one kind of went viral.

Mami: Oh. なに？

Michael: So there's, like, hundreds of these teams and companies in China, they're all making humanoid robots, and all of them are better than, like, all of the Japanese robots. It's kind of insane now, right?

Mami: うん。

Michael: But I guess there is this Toyota robot that plays basketball...

Mami: Oh.

Michael: ...and it went viral. Um...

Mami: ん？ “Basketball.” Oh. Oh.

Michael: Did you...?

Mami: トヨタのあれ着てるじゃん。

Michael: Did you find the video? It's not very humanoid, though. It has, it has, like, hands that are designed for a basketball, and it has the wheel feet.

Mami: Oh.

Michael: Which, I'm not sure how I feel about the wheel feet. I feel like it's just... I don't know.

Mami: ってかめちゃくちゃでかくない？

Michael: Oh, yeah. This girl, like, goes and hands the robot a ball, and it just looks like the thing is way too massive.

Mami: あとその...

Michael: Like, it's literally, it's bigger than the Terminator, right?

Mami: これなにでできてんの？なんかその頭とさ腕がさ、ぼこぼこしてる。これな、なんなん・・・？その外側がね、なんかぼこぼこしたやつ、ものでできてるというか。

Michael: ぼこぼこしてる？どういう意味？ It's like... What do you think it is?

Mami: わかんない。

Michael: It's probably just a plastic shell or something, no? Or do you think it's...?

Mami: うん。ああ、そうだね。わあ、すごい遠くからゴール、ゴールっていうか

シュートしてる。わあ、みんなめっちゃ喜んでる。かわいい。

Michael: I mean, we've had robots shooting baskets for, like, 20 years now. But I guess it's cool.

Mami: うん。でも、うん、あれだね。ギネスレコード。一年前か。ギネスワールドレコード。その一番遠くから長距離シュートみたいなの。かわいい、みんながなんか「わあー」って喜んでる。

Michael: What's the distance?

Mami: えーわかんない。AI バスケットボールロボット。

Michael: But this one can dribble. That's actually, that's actually more impressive

than the shooting, is that it can actually dribble the ball.

Mami: 24.5メートルだって。あ、そうなんだ。ドリブルできるの？

Michael: Mm-hmm. So, I, I would like to see, you know, like, one-on-ones with the robot, see how it plays against people.

Mami: うん。確かに。

Michael: But probably it's too dangerous. It's probably a bad idea. I don't know. If that thing hits you, you're just dead, right?

Mami: うん。いやめちゃくちゃでかい。

え、しかもなんかさ、新しい写真見るとすごい見た目がパワーアップしてるっていうか。あのプラスチックのさ、凸凹のちょっと3Dプリンターみたいなやつじゃ

なくともう真っ赤なツルツルのアイアンマンみたいになってるじゃん。

Michael: Yeah. Yeah. It's getting bigger.

Mami: あ、これは結構怖いね。

Michael: Yeah. Toyota should just go ahead and build the Gundam. Like, what's taking so long? Just build a Gundam.

Mami: いやガンダム超迷惑だよ。めちゃくちゃでかいじゃん。

Michael: What? No. We have a Gundam and it doesn't do anything.

Mami: いやなんかさ...

Michael: It just, like, turns its head. Like, it's embarrassing.

Mami: いや昔その、そういう研究だったかなんかそういう企画で、こうガンダム

を実際作ってそれに乗ったらどうなるか
みたい。ただそのモーションが大きすぎ
て、中に乗ってる人いたら、もうすご
い酔っちゃうっていうか。

Michael: What?

Mami: その普通のさ、なんかこう安定し
て座るなにかね、あのしないと、普通に
乗ってるところモーションがでかすぎて、
前も見えないし、もう酔っちゃうみたい
な。

Michael: That's fine. I don't think that's a
problem. I mean, people get on, like, the
「ええじゃないか」 and all this crazy stuff
where you're, like, upside down and
backwards and...

Mami: Yeah, but that's different. But, but that's not the expectation that you have when you ride a robot and you're supposed to be controlling it in the context of ガンダム。 So...

Michael: It is for, it is for me. I, I don't think that's... Just build it anyways. If it's, you know, if it has to be piloted, you know, with VR or something... Like, we can't even make one Gundam? It's ridiculous. Just one. I'm not talking about, like, thousands of Gundams. Like...

Mami: いやめっちゃお金かかる。めっちゃお金かかる上にさ、使い道がないじゃん。

Michael: What? It can go...

Mami: めっちゃ邪魔じゃん。

Michael: It can... The next nuclear plant disaster, we can just send the Gundam. It'll just bury it. It'll be fine. There's got to be some use for it that makes sense, I'm sure.

Mami: え一次。

Topic 4: アルトマン襲撃 01:01:07～

Michael: On April 10th, a 20-year-old man named Daniel Moreno-Gama traveled from Spring, Texas, to San Francisco and allegedly threw an incendiary device at the gate of Sam Altman's home. No one was injured, but Moreno-Gama was arrested about an hour later outside OpenAI's headquarters, where authorities say he was trying to break the building's

glass doors with a chair and threatening to burn it down. After his arrest, authorities reportedly found a manifesto warning that AI would drive humanity to extinction, along with a document listing the names and addresses of AI company CEOs and investors. Altman responded publicly on X, posting a photo of his husband and child, writing that he hoped it might deter anyone else from attacking his home, whatever they thought of him. Then, early Sunday morning, two more young people were arrested after gunfire at Altman's residence, though whether there's a link to the earlier attack remains unclear.

Various news outlets have since

highlighted the online response as part of a broader anti-AI backlash, opposing AI development and AI data-center construction. In Maine, lawmakers have passed what's set to become the first statewide moratorium on AI data centers, and Reuters has reported that 11 other states are weighing similar legislation.

Mami: 4月10日に、テキサス州在住の20歳の男がOpenAIのサム・アルトマン氏の自宅ゲート内に火炎瓶を投げ込んだのち、OpenAI本社を焼き払うと脅しながら椅子でガラス扉を破壊しようとして逮捕されました。逮捕後、「AIが人類を絶滅させる」と警告するマニフェストに加え、AI

企業のCEOや投資家の氏名・住所が記載されたリストが発見されています。翌日朝にアルトマン氏は自身の夫と子どもの写真をXに投稿し、自分がどう思われているかと、自宅を攻撃することを思いとどまっ
てほしいと訴えかけました。しかしさらにその翌日朝、20代の男女が乗った車がアルトマン氏の自宅前で停止し、助手席にいた人物が窓から手を出して発砲する事件が発生し、車に乗っていたと見られる2人が逮捕されました。火炎瓶の事件との関連性は現時点では明らかになっていません。

各報道機関は、これら一連の出来事につ

いて、AI開発やデータセンター建設に反対する「反AI運動の波」と報じています。メイン州では、州全域においてAIデータセンター建設の一時停止措置が全米で初めて可決されました。ロイター通信によると、その他11の州でも同様の法案が検討されているとのことでした。

Michael: Yep.

Mami: Hmm. 連続だからね、ちょっと。日が空いてないというか。

Michael: うん。I think the comments online following these incidents is sort of what got the media to start characterizing it this way. And there are many examples of what people were saying, and, um, it's

sort of similar to the Luigi, uh, sentiment. And, um... So, there were a bunch of people on the internet saying that this guy was a hero and that all of these tech CEOs and investors should be Luigi'd, essentially. Um... And so, I think that's sort of... I mean, a lot of media was, were basically writing the same article. I mean, it's just a list... I don't know how this happens exactly when it's not, you know, it's beyond the actual event. It's sort of a, an interpretation, right? That there's, like, this AI backlash, and, uh, and that it's likely to intensify.

Mami: Hmm.

Michael: What do you think? Do you think that's accurate or not necessarily? Is this sort of a, more of an isolated...? Is it

overblown to say that, you know, there's going to be a massive uprising against AI? Or...?

Mami: うーんまあ Unabomber ともいたから。その、まあ特にAIに関しては実際にこうね、仕事がなくなっちゃったりとか、その実害がある人も大量にいるわけだし。こういうふうに人類を絶滅させてしまうのではっていうふうに、そういう将来的な懸念がある人もたくさんいるから。遅かれ早かれそういう過激なことをする人は出てくるのは、出てくるだろうなとは思ってたけど。そのルイージのユナイテッドヘルスケアのときにその、それをやったこと、あの暗殺したことによって拒否率がちょっと改善されたりとか、

なんて言うの？システム自体が変わったわけじゃないから問題はまだ山積みなんだけど、上辺上ちょっと効果があったように見えてしまう可能性もある結果になっているから。ちょっと良くない前例にはなってるのかなっていう感じはするけどね。

Michael: うーん。 There are still a lot of people who support that kind of action, it, basically, violence, um, against corporations, against, um, CEOs. You know, there are, there's sort of...

Mami: まあ特に...

Michael: ...there's a movement behind that Luigi thing.

Mami: Yeah. まあ特にそのユナイテッドヘルスケアの場合はやっぱりね、そのせいで家族がすごく苦しんだとか死んじゃったとか、そういう人もいるわけ、いっぱいいるわけだから。その人たちもいるしその人たちに共感する人もいるだろうし。ね、サム・アルトマンの場合は別にね、サム・アルトマンのせいでなにか医療費が拒否されたとかそれとはちょっと違うけれども。ただ仕事がなくなるとか人類が絶・・・まあサム・アルトマン自身言ってるからね。その世界が終わる、AIによって世界が終わるだろうって言っちゃってるから。あの、そういう危険が高まるという意味では危なく

はあるよね。あの本当に気をつけないと。

Michael: Well, I, I think the totality of what Sam Altman is saying about the future is a little more optimistic than, than maybe the characterization you're giving there. Um... You know, it's not like that's the only interpretation or that's the only... If you look at everything that he's said, I think he's, on balance, much more optimistic about the future with artificial intelligence than, than that.

Mami: そうなんだけど。その、そこにたどり着くまでに・・・そのサム・アルトマンはいいよ。自分がOpenAIのね、CEOだから。だからそのまあ悪いこともあるしいいこともあるけど、とかなんかな

んでも言えるけれども。その実際に仕事なくなるとか、そういう人にとってはもう死活問題なわけであって。なにかそういうネガティブな感情がこう積み重なって、全部こいつのせいだみたいに、実際そうじゃなかったとしても思われる可能性っていうのはすごく高いから。しかもそのAIの顔みたいになってるわけじゃん。

Michael: I guess.

Mami: だから・・・うーん結構気をつけないと・・・まあ気をつけてると思うけどもともとね、セキュリティとか。まあだから今回怪我人もいなくてよかったけど。危ないっちゃ危ないしやっぱりその、ね、あまりにも絶大なパワーを

持って、お金もあるし、権力もあるしってなると。

Michael: You know, my, my concerns about AI, and I think most reasonable people have similar concerns, are, are actually beyond the, the labor market disruption. I think labor market disruption is a given, and that is something we've seen historically over and over and over. And you could say the industrial revolution, or you could say, you know, like, when automobiles were first being introduced. There were all kinds of, there's all kinds of opposition to automobiles, restrictions. You had to have someone walk in front of your car and ring a bell to let people know that your car was

coming. Like, the farmers were totally against automobiles. Um... And so... But then it... We all... I, I don't know if we all agree. The Amish don't agree. But most people agree that having automobiles was a good thing, on balance, for civilization, and that was something that was adopted, uh, globally. And, um... I think, in some ways, the reasonable position is, is somewhat fatalistic in that even if you oppose American development of artificial intelligence, you're just going to make things worse domestically. And, it's not, you know, countries that didn't participate in developing the internet got... You know, they didn't get the upside of developing the internet, you know? But they still have, they didn't stop people from developing the internet, you

know? So, inference is not, like, a, a local, local phenomenon, right? So, I think a lot of... You know, the concerns are valid, but what to do about those concerns is, needs to be well thought out.

Mami: でも...

Michael: And I, I, I've only seen, like, really, really bad ideas about what to do about it. Stupid ideas, mostly. Like, really stupid ideas.

Mami: でもなんか多分それがあるからこういう行為に走る人がいるというか。その止め・・・その大きい枠・・・例えば本当にこれで人類が絶滅すると思ってそれをものすごく大きな、もう urgent な危機感として抱いてる人がいるとして、

それをどうにか止めなくちゃって思うけど。その Michael が言ったみたいに国家レベルで言ったら、自分の国だけそれを止めるっていうことは絶対にないじゃん。ほかの国がやる以上は。あまりにもマイナスになってしまうからガンガン進めるしかないってなったときに「なにかしなきゃ」って言って、そう、こういうことをする人がいるっていうのは予想はできるから。その車とかさ、車があればすごく便利になる、でしかも一般の人にとってもすごく便利だとかさ。まあその産業革命もそうだけど、なんかそれとやっぱちょっとレベルが違うっていうか。使っていない人もいるし、全然そのそれによって便利になるっていうことを実

感してない人もたくさんいて。「いやそんなのなくてもいい」と思ってる人もいっぱいいて。車とかみたいにわかりやすいメリットではない場合もあると思うんだよね。その、AIを追いかけてる人にとっては obvious かもしれないけど、追いかけてない人にとっては「なにこれ」って多分思ってる人も思った以上に多分たくさんいて。だから...

Michael: I mean, I think that's mostly ignorance. I think the benefits of AI will be far more universal than the benefits of automobiles. It's, like, not even close. But...

Mami: え、そうなんだけど。その、だか

らそれを ignorance って言うのは簡単な
んだけど、多分思ってる以上にそこを把握
してない人もたくさんいて当然。新しいもの
だから。ね、学校でも習ってないしわかんない
わけじゃん。だからそこでこう恨みみたいな
ものが溜まってしまう人もいるだろうから。
まあその本当に一部だろうけどね。これ、まあ
これ続いたからちょっとなんか波みたいに見える
けど。ここまでする人がどれくらいいるか
っていうともう本当に少ないと思うけど。ただ
本当『ターミネーター』の世界みたいに、人間
対ロボットみたいなさ、人間対AIとか。まあ
映画なんて基本そうじゃん、人類がロボットと戦

うとか、AIみたいなそのマシンと戦うとかさ、乗っ取られそうになるみたいな。そういうシナリオを想像する人にとっては恐怖でしかないし、AI関連企業なんてもう邪悪でしかないと思うわけじゃん。

Michael: I do think that, you know, public discourse and sort of the, uh, some, like, um, ethical engagement, just in terms of like... There's some amount of fear that comes from either misunderstanding or just not understanding, um, you know, what is going on. And also there's just an inherent unknown. Um... But unfortunately, you know, a lot of the action and, and policies that anti-AI

people are advocating for now are, are just, all they're going to do is ensure that the displacement is local. Whereas the, the value creation is, like, overseas. So, it's actually the worst strategy in terms of labor markets. You're, you're localizing the displacement, and you're, and you're exporting all the, the upside.

Mami: Yeah.

Michael: Um... And, and so, and then you'd have to export something to get that value back. But, but now if you try to do that, all, all your tools for value creation to be competitive are foreign-owned. So, you're, it's, it's just, it's so destructive from a competitive, uh, standpoint and just for, for labor markets, generally. You know, so this, this idea of,

like, a moratorium on data centers like Bernie Sanders is suggesting, it's just no understanding of economics or labor markets at all. You're, it just makes no sense. If he was advocating for some kind of, like, international agreement, then I'm on board. I think that makes sense. But we would need sort of an international governing body, like, like we have for, like the Atomic Commission or something that has... You know, it's just sort of an AI safety oversight mechanism, right? Internationally. I think that's important. But, to just sabotage local industry is, is, it's just, it's bad for labor markets, domestically. So, I don't understand that, what that is.

Mami: 私、個人的にはさ、なんかこうやって攻撃したりとかして、むしろその evil origin story みたいな。そういうポジションにいる人が「あ、人間ってみんなばかじゃん」とか、その jaded になってしまおうと逆に怖いからやめてくれ。やめてくれって思うんだよね。そういう意味で。わかる？

Michael: I do think it's, you know... I don't know if it's necessarily going to lead to sort of a villain arc, but I do think people in a position like Sam Altman experiencing fear for their lives is not conducive to, like, a...

Mami: It's not good for me, you know?

Michael: It's not...

Mami: It's definitely not good for a lot of people. Like...

Michael: It's bad PR on behalf of civilization.

Mami: そう。Yeah. それは本当にそう。で、イーロンとかもそうじゃん。元々はなんかすごい平和だったけど、もうめっちゃ叩かれたりすっごく unfair な扱いを受けまくった結果「もういいや」ってなって、なんかツイッターで暴言吐いたりとかさ。なんかこうやっぱりそのちょっと origin story 的な流れがあったわけであって。なんかそういうのが全くなければ多分もっと平和な感じを保ってたと思うんだよね。だから・・・で、確かにそ

の本人のポジションになって考えてみると。ね、普段から、こんなことがなくたって普段からセキュリティをすごいちゃんとして、まあこうやって攻撃されたりするかもしれない、変な人に狙われるかもしれない。それでなくても公の場にいるわけだから、ね、ストーカーされたり変な人だっているだろうし。こうソーシャルメディアで罵詈雑言言われたり、メディアで変なこと書かれたり。ね、政府にunfair な扱いを受けたりとか、その政権によって。まあずっとずっとそれを何年もやってたらさ、もう「ああもうみんな死ね。くそ」みたいになる、誰でもなり得るわけじゃない？だからサム・アルトマンだって多分そうであって。あまりに

もそこをプッシュするとやっぱ本当に私にとって良くないからやめてくれ。

Michael: Well, I think, sort of, like, what you were, the impression that Sam Altman gave you, you know, I think Elon's messaging on artificial intelligence is much more conducive to a, a, a peaceful future. You know, he's saying that this is universal high income, you know, this is, um, a path to abundance for everyone, and that the purpose for doing this is for the benefit of people who are on, you know, the, the bad side of wealth disparity right now. And, if that's not the purpose for doing it, then why are we doing it, right? And so, I think that piece is kind of missing from Sam Altman's vision. You

know, when he's, he's getting asked certain questions and he's like, "Well, I just tell the investors that we'll ask the AI how to make more money," it's like, "Dude, you guys have enough money. You guys have enough of..." Like, "Get off the investment topic for a second and put a little more energy into sort of the positive vision." You know, the vision is sort of a statement about his intent. The, the, you know, what's the mission statement of the company, right?

Mami: Yeah.

Michael: And it, it can't just be more tokens, more tokens, you know, forever. So...

Mami: Yeah. やっぱりその this, like, benevolent psychopath-ish. You know,

there's a goal, and then they will do whatever it takes to achieve that goal. You know, it doesn't matter if a lot of people don't like it or not. It doesn't matter, right? They believe in their vision. They think that they need to do it and they will do it. And そのプロセスの中でさ、ものすごい成功してまあすごくお金も持っていて。だけど今経済もね、いろいろ大変なことになってて毎日暮らすのも大変な人もいる。その中で、こういうなんか大金持ちの手の中にその私たちの、人類全体の未来がこう転がされてるみたいな図になっちゃっているから。だからこれが失敗しようがうまくいこうが、まあそこまで彼らの人生は別に終わりにはなんない

わけだよ。もうある程度歳もいってるし。ね、仕事もあるしお金もあるし。だからあまりその、普通の一般人に比べるとそこまで stake が。本人はそう思ってないと思うよもちろん。いろんなものをかけて人生をかけてやってるけど。傍から見て、一般の人から見て、まあそこはまた全然違う話だから。

Michael: Doesn't Sam Altman have a, um...? What do you call it? Like, um... Not a hideout. What's the name for it? Like, the prepper...

Mami: Bunker?

Michael: Bunker? Yeah. It, wasn't he, didn't he say that he has like...? Maybe, maybe it's not quite...

Mami: Wasn't that Zuckerberg?

Michael: Was it? I thought Sam Altman had that, too. But, but who...

Mami: I'm sure, I'm... You know what? I'm sure they all have it. Why not?

Michael: Anyone who has... I don't think Elon has it.

Mami: Panic room.

Michael: I, I...

Mami: They have a panic room, they have bunker, they have everything.

Michael: Just, just commit to going down with the ship. Just commit. It's fine. And then just don't, don't sink the ship.

Please. Just commit to not sinking the ship.

Mami: でもだからそれがない...

Michael: But, as soon as I hear about the bunker thing, I'm like, "Alright, bro."

Mami: でもそれがさ...

Michael: "Okay, you bought an island in, you know, Kuwait or whatever." Like...

Mami: でもそれがだからほぼ不可能だからでしょ。その sink with the ship って言っただって、どんだけお金もあって、どんだけ、ね、あの資産もあって株もあって、なんにもあって、別に sink しようがないわけじゃん。だから...

Michael: No, it'll be over. Their, their bunker won't make a difference. You know, there's no way for the world to end and then the other, you know, seven billion, eight billion people on the planet

aren't going to find Zuckerberg. No. You will be found, dude. Just give it up. It's not going to, it's not going to work, okay?

Like, no.

Mami: They could, they could all go to Mars.

Michael: No. No.

Mami: They could just get the hell out and be like, "Bye, guys! Sorry! We fucked up."

Michael: No. It's totally pointless. It's just, it's, it's a, it's a bad look and it's pointless.

Mami: But, it, it...

Michael: So, just give it up. It doesn't make any sense.

Mami: でもなんだろう。だからその sink しようがない人たちに未来を握られてるような状態に見えるし、実際まあそうい

う側面も大きいから。それはやっぱり難しいよね。

Michael: Did you see...?

Mami: でも子どもとかはね、本当に関係ないから。だから Unabomber みたいにさ、関係ない人まで殺そうとするとか。まあこれもさ、自宅に行って・・・

Michael: Well...

Mami: ってかサム・アルトマン一人を殺したところでなにが、なにもさ、多分変わらないし残念ながらこの人たちにとっては。だし、そういう子どももいるところでさ、そういう火をね、投げ込むとかっていうのは絶対にだめだから。

Michael: Um... Yeah. Ted Kaczynski did talk about AI specifically in his manifesto.

It was, it was one of the main concerns that he had. And, um... It's, it's not to say that it's, uh, incorrect to have those concerns. Again, it's really about what to do about it. But, you know, he was sending explosives to scientists, to researchers. And have you seen this thing about NASA scientists, JPL scientists...

Mami: Oh, yeah.

Michael: ...nuclear scientists, fusion researchers? Like...

Mami: そのリストにするとすごいよね。
怖く見える。

Michael: Like, a lot of them are, like, missing.

Mami: Yeah.

Michael: Like, we don't even know where they went or what happened. And, and now it's actually being formally investigated, as of, like, yesterday or something. And... It's, it's possible that there's some Luddite, technophobic group that's actually assassinating researchers. Like, scientists, right? It's... I mean, it's possible.

Mami: Well...

Michael: But they wouldn't get caught, you know, with a chair smacking a window like this dumb kid. You know, they would, they would... There's, like, way more, you know, capable professional people out there, right?

Mami: But, I would... Yeah. I would assume more like... Technophobia ってい

うかなんか other countries, maybe? You know?

Michael: But why would they target a, a, like...

Mami: To hinder the...

Michael: ...nuclear physicists or, like, or, or some researcher at JPL? Or, or, or, like, what, why... I don't really understand that. And we, we don't know...

Mami: Well, I mean, researchers are assets to the state, so...

Michael: Sure.

Mami: Yeah.

Michael: But it's all type... It's sort of similar targets to Kaczynski.

Mami: If there's a conspiracy, yeah.

Michael: It's sort of statistically very

strange if these are not somehow related to each other at this point.

Mami: あの...

Michael: It's sort of like the Boeing thing. At some point it's like, "Okay, now this is sort of too strange."

Mami: そのレイージのやつもさ、ユナイテッドヘルスケアもさ、皮肉なことにこう拒否率が異常に高いっていうのも、まあAIの自動拒否が一部の原因であって。まあそれ議会で禁止するかどうか検討したりとかしてるわけじゃん。まあそれはAIが悪いっていうよりかはAIの使い方が雑だったりまあ evil だったりするわけだけど。だから、ね、そこでこうAIとかテクノロ

ジーに関して「むむむ」って思ってる人も、まあそのユナイテッドヘルスケアの事件のときにも思うところもあっただろうし。いやーちょっとね、大きすぎるからね、あまりにも。なんか規模が。権力が大きすぎてその差が、一般人との差がもう開いていく一方だから。

Michael: うん。 You know, like, Elon, before the huge AI wave really came on, was very publicly, um, making efforts to limit...

Mami: Yeah.

Michael: ...and slow down AI research because of sort of these existential concerns. And no one listened, no one cared. Like, it, didn't, it, you know, it, it

was like... But that was the right timing. That was the right timing. And I feel like that window is completely closed now.

Mami: Yeah. Yeah.

Michael: There's no way to coordinate it from an international standpoint. Elon himself, you know, gave up and decided to... You know, he said he could either be a participant or a bystander. And, and so he was, he sort of resorted to being a participant. But, you know, a lot of the people involved and, like, leading this research have the same existential concerns that the general public has.

Mami: Yeah.

Michael: It's not like they're not concerned.

Mami: Yeah.

Michael: Maybe with the exception of Google. Their, their philosophy is, is a bit different. You know, they, they, at least the founders, you know, they are on record of, of having much less concern about the existential aspect of AI, um, which may not necessarily reflect, you know, the positions of the researchers there. But, um... Yeah. It is, just rationally, it's sort of like you can have that, those concerns, but also have this realistic position of like, "Okay, well, it's better if we have some influence of, you know, we can do something to try to ensure that it's done in a safe way." So...

Mami: Yeah. I mean, everything is moving towards extinction.

Michael: It's not.

Mami: I mean, if you, if you look at us as a, as an animal, if you look at us as an animal, we have plastics and everything, and, and our sperm count has decreased by incredible amount.

Michael: Not me, bruh.

Mami: We're not mating. People are getting married less and less. People are not even dating that much. Um... And, you know, it costs more and more to raise children, so people have less children. So... そこでなんかこうさ、 and then you need even less people thanks to AI, so you hire less people. We, we just don't need that many humans anymore. その人口が増加する方向のドライバーがないじゃん。で、それが減っていく一方。AIができ

ることが増えれば増えるほど、そのドライバーはさらになくなっていく一方で。そこについての解決策というか、その、どう、え、これってどうするんだっけ？みたいなのを誰もわかんないままただただそっちに突き進んでいるから。だからそれをそこまでの危機感を持って見る人と「まあそうになったらそうなったで」みたいな人と、それは本当にグリップの問題だから。

Michael: I mean, do you think we need to have, like, a three-child policy? Or, like, what, at what point is it, is it actually existential to the point, like, where something drastic needs to be done? Um... And, I mean, I don't even know, is

this ever a matter of, of policy? Or is it a technology thing?

Mami: Well, we're...

Michael: Or...? There's just too much plastic. Um... I mean, it's like...

Mami: We're, we're animals, so first of all, without the 心理的安全性 we will make less children, right? That's given. And, and, again, the...

Michael: But we're, we're safer than we've ever been. The more disposable income people have, the less children they have.

Mami: Well, safer as in... So, the moment that we switch to this 核家族 situation, right, we're not... "It takes a village to raise a baby," but we don't have a village anymore. So, that's, I would think that

that's one of the biggest factors to begin with, in terms of 心理的安全性、right?

Yeah, we're, physically we're safe. You know, we're not surrounded by, I don't know, lions or other tribes trying to kill us or anything. But, it's just we, when it comes to money, yes, we, we might have more resources than in the past, but we don't have enough human resources.

Um... それがまず解決されないといけないし。で、そのまあ経済もね、その一人がじゃあ仕事して一人が child rearing すればいいっていう、だったらまだ、それでも核家族でもまだいけたかもしれないけど。2人とも働いて child rearing もしなきゃいけないってなった

らもう一人もいないわけだよね、その子

Michael: You know, I...

Mami: できる人もいるかもしれないけど
すごく珍しいわけじゃん。

Michael: I think even, like, two or three
generations ago in Japan, you sort of had
to be a part of the community. It was just

a requirement. Like, you couldn't not interact with your neighbors and stuff. You'd be super weird. But now, everyone just moves to the city, you don't even talk to your closest neighbor, nobody's interacting with anyone. Like, that's, proximate...

Mami: Yeah. And I think the biggest, biggest... It... Well, like, その本当に2つに分岐してたのが私たちのおじいちゃん・おばあちゃん、親の世代だったと思うんだよね。そこでまあ専業主婦でお父さんは働くっていうモデルが確立されてて、なんとなくうまくいってるように見えたわけじゃん。子どもも増えて。だけどそこで男女でパワーの差がすごく大きくなって

しまったために苦しい思いをした人が
いっぱいいたわけだよね。その例えば不

わけだよね。動物として多く

のメスが、メスたちが、 for self-preservation.

Michael: There, there are a lot of, um, you know, boys or men who were also raised by just their mothers, which I'm not sure is, like, a totally, um, natural or conducive thing to, you know, the kind of flourishing we saw prior to that.

Mami: So, this is like a, there's a shared notion among women my age, I guess, like, you know, all the, all the housewives, most housewives, moms, told their daughters to, to get a job and, you know, make sure that they're not going to be put in a vulnerable position. だからそこで、この世代がすごくうまくいったらまた違ったんだろうなと思う。その “Oh, it's

actually okay. It's safe, um, to not have a job and focus on, you know, reproduction and raising your children. You can get married early 20s and..." Um... Then you, you have enough time to make three or four children. But because we were told to secure ourselves first, 'cause it's dangerous, it was dangerous for a lot of women. So, I think that kind of changed everything.

Michael: Well, I think a lot of women went to, into a workforce that was, you know, sort of the, the same structure that the, you know, dedicated worker man was in. So, there was sort of a compatibility issue. So, I do think... There was sort of an imbalance there. Whereas now, um, a lot of workplaces are much more understanding of, you know, people

becoming mothers, for example. You know, um, just, just having...

Mami: Well, as a society...

Michael: ...having, just the environment that women worked in initially, in this transition period that you were talking about, was not nearly as, uh, you know, considerate or understanding as some of what's available now. But I mean, a lot of people would say there's still a long ways to go, right?

Mami: Yeah. いやそもそもだからその、そのどっちかが家にいて子育てをする。少なくとも一人は確保されてた状況から、それだと危険だから、その個人にとって。子育てしてる個人にとって危険だからどっちも仕事を確保しなきゃいけ

ないってなったわけじゃん。その結果、子育てだけに集中する人が家の中でいないわけだから、仕事してるわけだから。で、そうなるとじゃあ今度はどっちかが仕事の一部を犠牲にしなくちゃいけない、キャリアをちょっと犠牲にしなくちゃいけない。でも仕事もして子育ても、どっちもしなくちゃいけないわけだよ。今までどっちかでよかったのを両方しなくちゃいけない。で、それを男女で均等に分けられればいいけどそうもいかない。まあそれできる人もいるけど。そうするとどっちか、両方のキャリアが例えば hinder されてしまうとか。で、だったらじゃあどっちか多く稼いでるほうは仕事をして、もう一人は仕事もす

るけど子育てもしなきゃいけないとか
なって。さすがに動物としてそれはちょっと無理がある状態を今続けてるのが今なわけじゃん。で、当然...

Michael: Because we don't have sort of... I mean, if, if the sort of community rearing of children was still intact, then maybe that would have gone better.

Mami: そうそうそう。

Michael: And I think especially because this has caused a larger generational age separation, um, that's, like...

Mami: そう。だからその、そこで悪い循環に入るのが、だからキャリアも作ってから子どもを産むってなると、自分の親が歳をとってきてるわけだよね、昔に比

べて。だからおじいちゃん・おばあちゃん
がまだ40代ですごく元気で3人孫見てく
れるとかでもないわけだよ。近くに住

ると子育てしてる間に介護まですること
になるとか。だからそこで子ども3人もい
るのに...

Michael: Yeah. And then you can't have
someone with 認知症、like, watching the
baby or something.

Mami: そう無理じゃん。

Michael: You know, like, this kind of stuff
doesn't really work as well. So, it's...
Yeah.

Mami: そう。だから、だからその状態の
心理的安全性という意味で「ああじゃ

あこれだったら3、4人産んじゃおう」ってなるのはすごく難しいわけだよね。

Michael: Yeah.

Mami: とか、まあゼロ人、多分0から1が一番ね、あのハードルが高いっていうかそこが多分減ってる。3人産む人は3人産んでるし。だけど多分ゼロが増えてるっていうことだと思うんだけどそもそもは。でもその一人を産むハードルがすごい上がってるからやっぱり。だってそれはそうだよね。毎日一生懸命仕事して帰ってきてそれをさ、毎日やってる中で「え、これプラスで子ども？どこにそんな余地があるわけ？」ってなる人が多いから。

Michael: So, extinction.

Mami: うん。だから増えるドライバーがないからね。と思うよ。だってそのトキとかさ、その絶滅寸前の動物とかどんなに頑張っ、人間がさ、後からそのポリシーみたいな意味で頑張ったって、本人たちが「え、無理」って思ってたら無理なわけであって。

Michael: Well, people need to work more, so we have more 税金 to give people so they don't have to work as much. Wait a second, that doesn't work.

Mami: そう。

Michael: じゃあどうするの？

Mami: だからその、本来だったらその、ね、家族の中で一人なり、なんか決まっ

た人が仕事して、残りは子育てに注力できる。それがお母さんなのか、おじいちゃん・おばあちゃんなのか、おじさん・おばさんなのか、近所の人なのか、誰でもいいけど。とにかくその人的リソースが必要なんだけど、それが無いから。「あ、ないな」ってなったらそりゃ産まないよね。

Michael: So, what? どうする？

Mami: え、だからもう絶滅一直線。だからやっぱりそれが、だから本当に最近思うもん、それが答えなのかなって。だからその発展する、要は経済的な意味での発展をすごく重視して、accumulationだよ、富の。だからその hunter-

gatherer をやめて農耕民族になって富の accumulation にスイッチした段階で、そっちに、こっちにやっぱり向かってしまっただなって。その、それを重視した途端にもう「いやもうみんな働こう」とかさ、なるわけじゃん。だから share、村でみんなでその食べ物をシェアするとかじゃなくともう個人個人頑張っていくかに富を、ね、貯められるかっていうことに注力しましょうっていうゲームに変えた瞬間に、子どもなんて言ってる場合じゃないってなるよねそりゃ。

Michael: Well, Elon seems to think that AI and robotics, within, like, ten years, will be generating so many, you know, products and services that people will just be able

to focus on meaning and reproduction. And, and there won't be a need for people to, you know, fill out spreadsheets and send emails and, um, you know, make shoes or this sort of thing. And, in theory, I, it makes sense to me. Like, like just this week, um, OpenAI released their version of a human emulator. They call it "computer use." And sort of this human emulator technology is, is rapidly increasing. Now, that is going to result in, you know, labor disruption, like, big time. Um... And so, it's, like, the, the real worry is just this transition. It's like a very dangerous transition, where we have to, we have to make it through to the other side of this transition of human emulators in sort of the online space, and then

human, human emulators in embodied, you know, humanoid robots, right? Because there's nothing that, there's not many things that people can do that aren't doable in theory by a human emulator on a computer or a human emulator in humanoid robot form. So, how do you get through this transition period? And then how will governments...? You know, are they going to respond as positively to this as Elon is suggesting? I think there are a lot of people that are worried that governments will not, will not have sort of the, the sort of reaction that will relieve everyone of their duties, you know?

Mami: Yeah.

Michael: It's sort of like, it, it could be a boot on the neck rather than, um, liberation, right? And it's, it's sort of hard to tell which way that's going to go.

Mami: うん。だからその、そのイーロンが言ってるみたいなの、桃源郷みたいなの。理想の桃源郷みたいな状態になるにはものすごい大幅なポリシーチェンジが必要で。それが間に合うか？って。その人類が絶滅するまでに間に合いますか？って話じゃん。で、今の...

Michael: Well, we need policy for the transition, even before that. That's the problem.

Mami: そう。だから間に合わなくね？

って多分現実的に考えたら、どう考えたって間に合わないじゃん。すっ・・・
だって今、人類が考えたこともない

んかその・・・いや無理だよね多分。だ
から本当だから無理だよ。

Michael: Well then where's all... Where is it all going to go? I, I think these...

Mami: だからこうやって...

Michael: I think governments will actually be less powerful, relative to these, um, these AI...

Mami: だからこうやって civilization っ
て...

Michael: These AI companies will become much larger than, than most governments, I think, in the, in the near future. That's sort of the thing...

Mami: だとしても、だとしても民主主義である限り、その成人における

influence ・ ・ ・ まあある程度のね、大きな influence 持ってるとしても限界がある

じゃん。だから・・・で、その意思決定の速度をじゃあそういうロビイングしてる人たちが変えられるかって言ったら速度がそこまで、ね、じゃあ5倍にするとか無理じゃん絶対。だから・・・だからこの間とかローマ行ったとき、ローマ帝国のこと考えて。その、ね、衰退していくときに、どれ・・・なんかそのいろいろ研究とか見てるとさ、「あ、衰退してるな」ってどれぐらいその中にいる人が理解してたか。ローマ帝国が fall するっていうことをどれぐらいみんなが認知してたか、いつ頃から認知してたかっていうと、私たちが思うよりは気づいてなかったわけじゃん。ということを考えると、

「あ、こうやって civilization って終わっていくんだ」って。その必ずしもネガティブっていうよりかは、もう客観的に見て「あ、こういうふうに終わるのか」とは思うよね。だからやっぱりその人類の繁栄の、繁栄のその定義の仕方っていうかさ。じゃあみんながハッピーで、子どもたちもみんなハッピーで安全で、そういうことをじゃあ一番の優先事項にしてきたかっていうとそうじゃないわけだよ。そういう資本主義的なところに重きを置いてきてしまったから。そうすると、まあこうなるのかという。まあすごいネガティブに聞こえるかもしれないけ

ど、そこまで私は悲観してるっていうよりは、こう面白いなと思ってるけど。

Michael: That doesn't help. I think...

Mami: なんかでも宇宙の、宇宙の摂理と
いうか。なんか...

Michael: So you think this is some, you know, we're right up on the, the Great Filter here, and, uh, we're, we're not going to really figure this one out, basically.

Mami: うん。だと思う。だからその...

Michael: I, I have the opposite take on this. You know, I have the same concerns. But, I think we will absolutely get through...

Mami: Figure it out?

Michael: I think we'll get through this transition, and, uh, I think things will be

much, much better on the other side. Um... I, I do think that AI is going to become extremely powerful in a way that will actually disempower some of the bad actors that we have, uh, that are human, you know? So, there, there's some upside there. And, uh, you know, if it turns out that AI is just, like, a, an evil alien, um, then that sucks, but, you know, it, it is, it is... I guess I agree with you in the sense that, like, this is the most interesting time you could possibly be alive to witness in the history of human civilization.

Mami: Yeah.

Michael: 'Cause something very interesting is going to happen over the next five, ten years. Um...

Mami: ‘Cause this is literally the biggest test that humans have been faced with.

Michael: We'll figure out the quantum thing. We'll...

Mami: で、その答えがないまま突き進むだけ突き進んでるから。Well...

Michael: I think on the other side of this will be the, sort of the first time we'll be in, um, I don't want to say like a utopia, but I, I think the upside is, is literally unimaginable. It's like beyond what we can imagine, the upside.

Mami: Yeah. I...

Michael: And if, if we don't, you know, if we, if we don't usher it in correctly, then it could get very ugly in the transition. Um... So, I do think the transition could be very bad, in a lot of ways. Like, there's no

way... You know, it's like when, when a baby is born, there's, like, screaming, there's risk, there's fluids, there's chaos, there's anxiety, there's all these things going on. But then, you know, there's, there's, um, generally a very positive outcome on the other side of that. So I think it's, it's similar to that.

Mami: Yeah. I, I guess I, I think more of it as, like, similar to the climate change issue, you know? It's like, "Oh, shit. This is not good. This is not good. We can't keep doing this. We can't keep doing this," and we keep doing it. Um... But I'm glad at least one of us is, is positive...

Michael: Well, hasn't climate change...

Mami: ...about the future of humanity.

Michael: Hasn't climate change worked out, like, way better than we were worried it would? I mean, we're, it's way better...

Mami: But we're not...

Michael: If you go back and you watch *An Inconvenient Truth*, like, we've completely avoided all the worst-case-scenario things that were in that...

Mami: Well...

Michael: ...you know, I don't, you can't really call it a documentary because it's about the future, but...

Mami: We're not really there yet. I mean, when, when all the ice melts.

Michael: We're, it's not even close. It's not... It was supposed to be melted by now. So, like, I think things have worked out much better than I personally

expected in terms of climate change. And if you go back and look at what people were saying would happen, this is, like, a very rosy version of what they, what any of, any of the climate change activists were depicting. It's just objectively true.

Mami: Well, when it comes to the population collapse.

Michael: That's a bigger issue.

Mami: As a, yeah, as a woman who has given birth, um, I'm quite pessimistic about it, but not in a negative way. If that ever makes sense.

Michael: You said we're going extinct. What?

Mami: Yeah, we are.

Michael: No.

Mami: I mean, yeah, it's kind of like I'm observing how a civilization is, I don't know, becoming doomed. But...

Michael: You can just be more optimistic. There's enough wiggle room there, there's enough unknowns there to just... It's like, "Okay, bad things could happen, maybe it doesn't work out," but you can still be optimistic, you know?

Mami: So, I'm being optimistic in, in a sense, though. 'Cause I'm enjoying observing this whole thing. Like, "Oh, so this is how, this is how it happens."

Michael: No, that's, that's Schadenfreude. That's not optimism.

Mami: You know, it's, it's almost like I'm in, I'm in the god mode and just observing the whole thing. Like, humans as an

animal. And all the other animals are fine without us. So, I'm not being bitter or anything. I mean, it might sound like it. But I'm... This is very interesting to observe.

Michael: I just don't, I don't feel like I know enough to be that pessimistic. There's just... There's... Yeah. I'm not even close, you know? I feel like I have to, I have to...

Mami: Well, you don't have to know enough to be pessimistic. I think being positive I feel like is more stressful sometimes.

Michael: What? No.

Mami: Because there's, like, all kinds of negative elements in the reality. So...

Michael: That's fine. That's always, there's always going to be negative stuff. Not everything's going to be positive.

Mami: Yeah.

Michael: It's just, you know, it's just...

Mami: I'll, I'll still bet on extinction.

Michael: What? There's no reason to bet on... There's nothing to bet on. You don't get, you don't get anything. There's nothing left to get.

Mami: Yeah. It's, it's like a game because it doesn't matter what I believe, right?

Michael: Well, I think it, it does matter.

Mami: But I think that it's interesting if we are actually doomed, then, then it means that... Maybe this, like, Fermi paradox thing, right? Like, "So, this is what's happening..."

Michael: Doomed because of AI or doomed because of the birth rate? Or, like, what's the, what's the specific thing?

Mami: Combination of all these things.
Um...

Michael: Those two things.

Mami: Like, capitalism and, uh, giving up hunter-gatherer lifestyle, relying heavily on technology, developing AI.

Michael: Well, hunter-gatherer is a way back.

Mami: Yeah. So, I'm...

Michael: So, you just think technology...

Mami: I'm a firm believer of hunter-gathered living style.

Michael: You're just, you're just Ted Kaczynski. You're just, you're just Ted Kaczynski. You know...

Mami: だから accumulation of wealth,
that is the root cause of all of this.

Michael: I...

Mami: The desire to, to accumulate
wealth to calm your anxieties, that is the
root cause of everything that we're doing
right now. Everything. Where we are.
Driven by anxiety to not having enough.
That is the...

Michael: I totally, I totally disagree with
that.

Mami: Well, we'll see about that.

Michael: That, that, that... I mean...

Mami: I hope you're right, but...

Michael: I guess so, but... Um... I
mean...

Mami: I'm a radical hunter-gatherer
lifestyle believer.

Michael: I mean, you can learn, uh, Pennsylvania Dutch and go live with the New Order Amish. You know, they'll welcome you with open arms, and, you know, "Here's our horse and buggy..."

Mami: I'm not, I'm not anti-technology or AI. I'm just saying...

Michael: You can just grow sprouts and lentils for the next...

Mami: Yeah. That sounds so nice, right?

Michael: ...40 years.

Mami: Yeah. Why not? Oh, well. えー文字起こしのテキストや各エピソード毎の宿題はバイリンガルニュース公式アプリをチェックしてみてください。えーTwitter、

Michael: お願いします。

Mami: おしまい。

Michael: 以上です。

Mami: Bye.

Michael: Bye.
